DETAILED ACTION

Allowable Subject Matter

1. Claims 8-21 are allowed.

2. The following is an examiner's statement of reasons for allowance:

The best prior art of record, taken alone or in combination thereof, fails to teach:

Claim 8: determining a first state of charge value during a load period of the battery based on an estimated open-circuit voltage; determining a second state of charge value during a rest period of the battery following the load period based on a measured open-circuit voltage; comparing the first state of charge value to the second state of charge value; and detecting acid stratification when a defined deviation of the first state of charge value from the second state of charge value is exceeded; and assuming the first state of charge value for the rest period when the defined deviation of the first state of charge value from the second state of charge value is exceeded.

Claim 11: detecting acid stratification by: determining a first state of charge value during a load period of the battery based on an estimated open-circuit voltage, determining a second state of charge value during a rest period of the battery following the load period based on a measured open-circuit voltage, comparing the first state of charge value to the second state of charge value, and detecting acid stratification when a defined deviation of the first state of charge value from the second state of charge value is exceeded; and assuming the first state of charge value for the rest period when

the defined deviation of the first state of charge value from the second state of charge value is exceeded.

Claim 12: detecting acid stratification by: determining a first state of charge value during a load period of the battery based on an estimated open-circuit voltage, determining a second state of charge value during a rest period of the battery following the load period based on a measured open-circuit voltage, comparing the first state of charge value to the second state of charge value to define a deviation, and detecting acid stratification when the defined deviation of the first state of charge value from the second state of charge value is exceeded; and increasing a charging voltage for charging the battery when the define deviation of the first state of charge value from the second state of charge value is exceeded; and assuming the first state of charge value for the rest period when the defined deviation of the first state of charge value from the second state of charge value is exceeded.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
